Seasons: Earth, Moon, and Sun. Observe the motions of the Earth, Moon and Sun in three dimensions to explain Sunrise and Sunset, and to see how we define a day, a month, and a year. Compare times of Sunrise and Sunset for different dates and locations. Relate shadows to the position of the Sun in the sky, and relate shadows to compass directions.

revolves around the Sun. It takes about 27 Earth days for the Moon to rotate on its axis and about 29 $\frac{1}{2}$ Earth days (month) for it to revolve around the Earth.; Because the Moon's period (time) of rotation on its axis and period of revolution around the Earth are nearly the same, the same side of the Moon always faces Earth.

are complex. The motions involved in revolutions are superimposed on the movements involved in rotations. The Earth and the Moon both turn on their own axis (rotation), but both also move around another object (revolution). The rotation of the Earth (24 hours) explains the alternation of day and night.
